

## **YOU HAVE PARKED IN A BIKE LANE**

**Your action is hazardous to bicyclists, other motorists, and your vehicle. You are forcing cyclists to swerve into traffic where they may be struck or killed by an inattentive or aggressive driver. Motorists trying to avoid them may strike other automobiles, cyclists, or pedestrians. They could even hit your car.**

**You're also making life more difficult for yourself by inducing more people to travel by car, bus, or taxi, rather than by bike. This increases the traffic congestion that you must face. Eight to 15 bikes can travel in the space of one car or SUV.**

**(Source: Steven Faust, AICP, Transportation Planner, 2005.)**

**Here's how you can help avoid traffic injuries and fatalities, and reduce congestion and delays:**

**Don't park in the bike lane.**
